

HANFORD SITE PERFORMANCE REPORT	BY HANFORD FACILITY Collective Dose	APRIL 1998
------------------------------------	--	------------

These Radiological Protection graphs reflect planned (estimated) versus actual dose by Hanford facility. The "Other/ENCO" category is for subcontractors (generally craft workers) that potentially receive dose at more than one facility.

The following page includes trend graphs for Radiological related occurrence reports at the PHMC team. An effort is in place to gather similar data from Bechtel Hanford and Pacific Northwest National Laboratory. Occurrence Reports due to biological transfer (spread of contamination by animal or plant) or contamination due to past practices have been separated out on the second graph from the other radiological occurrence reports (which are on the third graph).
